

MAYFLOWER

STEEL BUILDINGS™

A-Model

The ultimate, all-steel building that's all about quality

Our Commitment to You!

The founders of Mayflower Steel Buildings have been serving the building needs of homeowners, hobbyists, business professionals, truckers and farmers for many years. We've learned that by making America's best steel buildings our real business is that of making dreams come true. Should you need room to grow, room to work or room to play, Mayflower Steel Buildings has the perfect building for you.

With Mayflower Steel Buildings you can be confident your building is backed by a 40-year limited rust-through perforation warranty on AZ55 Galvalume®. Whether you're purchasing a garage, a workshop or even a municipal arena, our friendly, experienced building experts and customer service staff guide you through the buying process from beginning to end.

To day, tomorrow or even 10 years from now, we're here to provide the prompt, professional support you deserve. You can rest assured knowing that Mayflower Steel Buildings stands behind our fine products. We are here to serve your needs.

Economical Quality & Durability

Our corrugated arch construction means strength and durability that virtually withstands the harshest weather conditions. Every Mayflower steel building is engineered to stand up to a variety of weather conditions. Additionally, since they are comprised entirely of AZ55 (metric = AZ180) Galvalume® coated steel, the finest American-grade steel available that is seven times more rust resistant than galvanized steel, they are sold with a 40-year limited rust-through perforation warranty on AZ55 Galvalume.

Available in sizes that range from 16 ft. (4.8m) all the way up to 40 ft. (12m) wide with unlimited lengths, the A-Model buildings are so versatile they are used for industrial shops and warehousing, for retail store fronts, backyard garages, fire stations or workshops.

They are easy to erect by simply bolting the panels together and can be built without the need for special tools or equipment by as few as four people in as little as three days. All

A-Model buildings are shipped with an easy-to-follow assembly manual. If a problem does arise, direct factory assistance is only a phone call away.

Every building is custom made to customer specifications and is easily expandable to any length. A Mayflower steel building provides maximum usable space for a minimal financial investment.

Need A Workshop?

A Mayflower steel building makes the perfect single or multiple-car garage or shelter for your boat, RV or ATV. It is ideal for workshops or equipment storage, as well. These buildings offer 100% usable interior space with no poles or beams to get in your way. A Mayflower steel building will provide protection for your valuable investments and you will also enjoy the protection of a 40-year limited rust-through perforation warranty on AZ55 Galvalume®. Remember the expansion of your building to any length is always an option.

"Made in America" is a statement that is used proudly by Mayflower Steel Buildings in describing the company's commitment to traditional American excellence in manufacturing. That commitment is best illustrated by Mayflower Steel Buildings' utilization of only state-of-the-art equipment operated by skilled technicians to manufacture its A-Model steel buildings.

Computer Engineering With Old-World Attention To Detail

Each A-Model building is very affordable due in part to a high technology manufacturing process and its unique design requiring less labor to produce. At Mayflower Steel Buildings, our advanced computerized engineering DID NOT REPLACE our seasoned draftsmen. Our modern systems were designed by our respected workers to help them serve you with greater speed and precision. The latest technology combined with old-world attention to detail make our modern engineering the envy of the steel building industry - thanks to one simple guiding principle - we are here to serve your needs!

"It's a very sturdy, strong building. Matter of fact, I told my wife if a hurricane or something come through I think we'd get out of the house and come out here in this. It's very super strong the way it's embedded in the concrete. I'm very happy with it."

- Homeowner, Tennessee

Why Steel?

At the heart of every great modern building, from schools to skyscrapers, is a frame of steel. Mayflower Steel Buildings' technology moves the phenomenal structural strength of steel to the building's exterior, providing a super-durable, cost-saving and labor-saving alternative to more common construction techniques.

Solid - Secure - Weatherproof

Designed to withstand high winds and heavy snow conditions, Mayflower steel buildings have been facing the weather throughout the United States for decades - without a glitch. Furthermore, Mayflower steel buildings are famous for standing up to a variety of weather conditions. What does that mean for you? Peace of mind - knowing your property is safe.

Mayflower Steel Buildings Go Up Fast!

STEP #1

Pour a simple floating foundation

STEP #2

Bolt arches together on the ground

STEP #3

Raise the arches into place

STEP #4

Install doors and endwalls

Accessories

Turbine Vents

Removes condensation and keeps building dry

Skylights

Heavy duty fiberglass offers good lighting

Overhead Doors

Heavy duty industrial overhead doors

Sliding Doors

Heavy duty double sliding doors, sealed at top, bottom and sides

3'x7' (1m x 2.25m) Heavy Duty Commercial Door

Totally insulated with keyed lock

JS1000™ Clear Coat commercial 5/16 (7.9375mm) hexagon head bolt

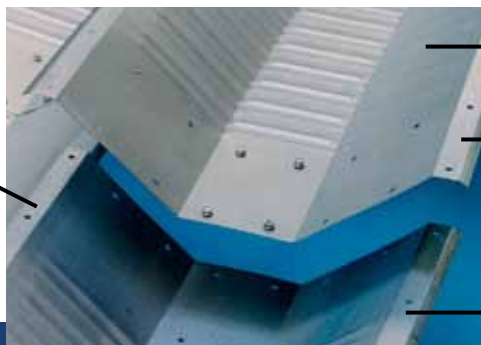

Nylon washer, no leaks

Heavy Duty Commercial GALVALUME® Coated Steel

Seven Times More Rust Resistant Than Galvanized Steel

The last 9" (230mm) of each end panel is flat so the two panels fit tight when bolted together making it easy to assemble. The bolts set on a flat surface, not a corrugated one giving a tight seal with no leaks.

All metric dimensions are nominal imperial conversions.

7" (178mm) large corrugation for strength

A full 9" (230mm) overlap with a double row of bolts for strength

What Makes Mayflower #1

- Every building is custom made to customer specifications
- Steel is a sustainable construction material and 100% recyclable
- World's most durable pre-engineered building designed to withstand a variety of weather conditions
- Manufactured exclusively in the United States
- Maximum usable space for minimum financial investment
- 40-year limited rust-through perforation warranty on AZ55 Galvalume®
- Designed by engineering professionals
- Remarkably affordable
- Voted superior to similar style buildings
- Made only from the highest quality, heaviest gauge U.S. commercial steel available
- Simple bolt-together construction
- Easily expandable to any length
- Completely maintenance-free
- Fire resistant
- Highly versatile, perfect for virtually any commercial, industrial, farm or consumer application
